

PRESS RELEASE

GoParts™ Animal Spring Kits Provide Drop-In Performance

Single and dual spring kits available for Stock, Controlled and Modified Class Animal engines

Beyond the camshaft, valve springs are probably the single most important factor for making HP with the Animal engine. To answer those needs, the GoParts™ valve train engineers are proud to introduce a full assortment of valve spring kits designed to deliver the ultimate in performance while meeting all rules requirements. Incorporating the same technology used to create valve springs for NASCAR competition, GoParts™ complete valve springs kits include everything you need to install these high quality single and dual spring sets.

Made from chrome silicon steel, GoParts™ Animal valve springs are ultra high quality and each kit comes with matched lightweight aluminum retainers to keep even the most radical camshaft profile under control. Featuring 10-degree angle locks to ensure they won't pull through the retainer, the GoParts™ Animal Springs are compatible with stock, controlled and modified class requirements. Best of all, installing a GoParts™ Animal Spring Kit ensures peace of mind that you have the highest quality, technologically advanced, and best performing springs available. For more information about GoParts™ complete valve springs set, go online to www.compgoparts.com or call 800-976-9376.

Quick Summary

Product: GoParts™ Animal Spring Kits

Applications: WKA or Outlaw Modified Animal Engines

Part Number: GP975-970 Stock Animal Kit; GP980-961 Controlled Animal Kit; GP985-959 Modified Animal Single Spring Kit; GP990-960 Modified Animal Dual Spring Kit

Availability: In Stock, Ready for Immediate Shipment

Benefits:

- Made from Super Clean™ Chrome Silicon Steel; the same material and engineering as used in COMP's NASCAR valve springs
- Component-matched precision kit shipped ready to install
- Lightweight aluminum retainers included
- Meets with Stock, Modified and Controlled class rules requirements
- Features 10-degree-angle valve locks that won't pull through the retainer
